

Starting Procedure

This motorcycle has a fuel-injected engine with an automatic choke. Follow the procedure indicated below.

Any Air Temperature:

I. <Using the start button >

With the throttle completely closed, press the start button.

<Using the kickstarter >

Lightly depress the kickstarter until resistance is felt.

Then let the kickstarter return to the top of its stroke.

With the throttle closed, operate the kickstarter. Kick from the top of the stroke through to the bottom with a rapid, continuous motion.

The engine will not start if the throttle is fully open (because the electronic control module cuts off the fuel supply).
