

CLEANING

Clean your motorcycle regularly to protect the surface finishes and inspect for damage, wear and oil leakage.

ATTENTION

High pressure water (or air) can damage certain parts of the motorcycle.

Avoid spraying high pressure water (typical in coin-operated car washes) at the following areas:

- Wheel Hubs
- Carburetors
- Instruments
- Under Seat
- Drive Chain
- Ignition Switch
- Muffler Outlets
- Under Fuel Tank
- Handlebar Switches

1. After cleaning, rinse the motorcycle thoroughly with plenty of clean water. Strong detergent residue can corrode alloy parts.
