

BRAKE SYSTEM INSPECTION

(Refer to the maintenance precautions on page 59).

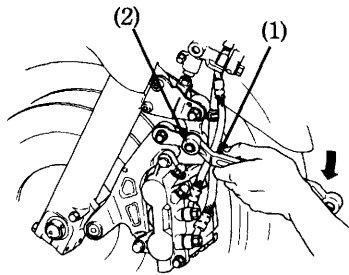

Check the brake system as follows:

1. Place the motorcycle on its center stand, stop the engine, and place the transmission in neutral.
2. Apply a 10 x 12 mm box end wrench (1) included in the tool kit to the left front caliper bolt (2).

3. Turn the wrench clockwise while slowly rotating the rear wheel. The brake system is normal if the rear wheel stops. If the rear wheel does not stop, see your authorized Honda dealer.

NOTE:

- * Turning the wrench counterclockwise will loosen the bolt.

(1) 10 x 12mm box end wrench (2) Bolt
