

## CLEANING

---

### **Painted Aluminum Wheel Maintenance**

Aluminum may corrode from contact with dirt, mud, or road salt. Clean the wheels after riding through any of these substances. Use a wet sponge and mild detergent. Avoid stiff brushes, steel wool, or cleaners containing abrasives or chemical compounds.

After washing, rinse with plenty of water and dry with a clean cloth.

### **Clean the Windscreen**

Using plenty of water, clean the windscreen with a soft cloth or sponge. (Avoid using detergents or any kind of chemical cleaner on the windscreen.) Dry with a soft, clean cloth.

#### **NOTICE**

To avoid possible scratching or other damage, use only water and a soft cloth or sponge to clean the windscreen.

For a dirtier windscreen, use a diluted neutral detergent with a sponge and plenty of water. Make sure to wash off all the detergent. (Detergent residue may cause windscreen cracks.)

Replace the windscreen if scratches cannot be removed and they obstruct clear vision.

Do not let battery electrolyte, brake fluid or other acid chemicals get on the windscreen and screen garnish. They will damage the plastic.

### **Clean the Display and Light Lens**

Clean the display and light lens with a soft, damp cloth. You may use a mild cleaner intended for eyeglasses or computer displays.

Harsher chemicals may damage the display and light lens.

#### **NOTICE**

To avoid possible scratching or other damage, use only water and a soft cloth or sponge to clean the display and light lens.

Do not let battery electrolyte, brake fluid or other acid chemicals get on the display and light lens. They will damage the display and light lens.
