

Turn the ignition key to the "ON" position.

Move the choke lever to the fully closed position. When the engine is to be re-started while it is still warm, the use of the choke is not necessary.

CAUTION

- * Do not operate the starter pedal while the engine is running as engine damage could result. Do not apply excessive force on the starter pedal.
- * Because the vehicle is equipped with an automatic clutch it is not possible to push-start the engine.
