

## RIDING

### ▲ WARNING

- \* *Review FOURTRAX Safety (pages 1-6) before you ride.*
- \* *Avoid “wheelies” and jumping as they may cause loss of control.*
- \* *Ride with your feet on the footpegs at all times. If your feet are removed from the footpegs and touch the ground while the FOURTRAX is moving, they may come in contact with the rear wheels, causing injury.*
- \* *The FOURTRAX is not designed to be ridden on paved surfaces. Handling and control will be severely affected.*
- \* *While carrying loads or pulling a trailer, use extreme caution when starting, stopping or turning the FOURTRAX.*

For your initial riding practice, select a safe area free of obstacles with a level surface of dirt or sand.

1. Make sure the transmission is in neutral and set the parking brake
2. After the engine has been warmed up, release the parking brake. The FOURTRAX is ready for riding.

3. While the engine is idling, raise the gearshift pedal to shift into SL (Super-low) gear.
4. Increase engine speed by gradually opening the throttle.
5. When your speed increases, close the throttle and shift to 1st gear by raising the gearshift pedal.

### CAUTION:

- \* *Do not shift gears without closing the throttle. The engine and drive train could be damaged by overspeed and shock.*

Shifting sequence
