## CARBURETOR

## **Choke Cable and Lever**

Check the condition of the choke cable (Fig. 4-8) and the operation of the choke lever (2). If the cable is damaged or kinked, have it replaced by your Honda dealer.

## Adjusting Idle Speed and Air-Fuel Mixture

## NOTE:

Do not try to compensate for faults in other systems by adjusting the carburetor.

Before adjusting the idle speed and air-fuel mixture, unsnap the right side cover. (Fig 4-9)

To adjust the idle speed:

- Warm up the engine. The engine must be warm for accurate idle adjustment. Ten minutes of stop-and-go riding is sufficient.
- 2. Adjust idle speed and turning the throttle stop screw (Fig. 4-9). Idle Speed:

 $1,400 \pm 100 \, \text{min}^{-1} \, (\text{rpm})$
