

## Speed Limiter

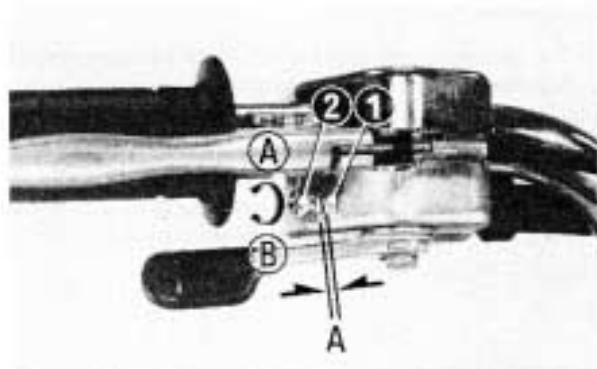

The speed limiter is a screw installed in the throttle control case. It restricts the throttle opening, thus limiting the top speed of the FOUR TRAX, and allows the parent to adjust the speed of the FOUR TRAX to meet the rider's skill level.

The speed limiter is factory adjusted so that distance A is 1 mm. This limits the top speed to about 25 km/h(15mph).

To adjust the limiter, loosen the lock nut and turn the screw. Tighten the lock nut securely.

### WARNING

*\* Failure to plug the hole after removing the speed limiter screw will allow dirt to enter, and may cause the throttle to stick open.*

- (1) Lock nut
- (2) Speed limiter screw
- (A) Less restriction (Higher top speed)
- (B) More restriction (Lower top speed)
