

Rear Suspension

The rear suspension can provide the desired ride under various rider weight and riding conditions through adjustments of the rebound damping, compression damping and spring preload adjuster.

Use the following chart to determine the correct adjustment for you.

▲WARNING

- * **The rear shock absorber assembly includes a damper unit that contains high pressure nitrogen gas. Do not attempt to disassemble, disconnect or service the damper unit; an explosion causing serious injury may result.**
- * **Puncture or exposure to flame may also result in an explosion, causing serious injury.**
- * **Service or disposal should only be done by your Honda dealer or a qualified mechanic, equipped with the proper tools, safety equipment and the official Honda Shop Manual.**
