

PARKING

1. After stopping the motorcycle, shift the transmission into neutral and turn the fuel valve OFF and turn the handlebar fully to the left. Turn the engine stop switch to  (OFF).
2. Use the side stand to support the motorcycle while parked.

Park the motorcycle on firm, level ground to prevent it from falling over.

If you must park on a slight incline, aim the front of the motorcycle uphill to reduce the possibility of rolling off the side stand or overturning.
