

# Answer Back System

The answer back system is a device to find the location of your vehicle.

When the immobilizer is active and you press the answer back button on the Honda SMART Key with the ignition switch **○** (Off) or **🔒** (Lock) position, the turn signals light, and the ignition switch ring lights, informing you of your vehicle's location. The ignition switch ring will light for about 1 minute.

The answer back system uses low-intensity radio waves. It may affect medical equipment such as a cardiac pacemaker.
