

Adjusting the free play of the rear brake pedal

Checking the brake pedal height

The brake pedal height can be adjusted to the rider's preference.

To adjust the rear brake pedal height:

1. Loosen the push rod lock nut and brake pedal adjusting bolt lock nut. Then turn the both adjusting bolts in direction "A" to raise the pedal, or in direction "B" to lower it.
2. Tighten the lock nuts at the desired pedal height.
3. After adjustment, check the brake pedal free play at the top of the pedal.

NOTICE

Make sure that the clearance between the front adjusting bolt and frame is at least 1~2 mm (0.04~0.08 in).
