

Precautions while riding

Running-in

For the first 500 km, follow these guidelines to ensure the reliability and future performance of your motorcycle.

- Avoid opening the throttle all the way and sudden accelerations.
- Avoid sudden braking and quick downshifting.
- Be cautious when riding.

! Jacket and pants

Highly-visible, long-sleeved protective jacket and sturdy pants (or a protective racing suit).

! Additional accessories for off-road riding

Road gear may also be appropriate for occasional off-road riding. However, if you plan on pursuing serious off-road riding, you will need specific gear for this purpose. In addition to a helmet and eye protection, you are recommended to wear boots and gloves for off-road riding, riding pants with hip and knee pads, and a jumper with padded elbows and chest and shoulder protection.
