

Refueling and suggestions on fuel

Follow these instructions to protect the engine and the catalytic converter:

- Only use unleaded petrol.
- It must be 95 octane (RON) or higher. If you use lower octane petrol, engine performance will be reduced.
- Do not use expired or dirty petrol or oil/petrol mixtures.
- Avoid getting dirt or water in the fuel tank.

NOTICE The fuel level in the motorcycle must be sufficient for the trip that is planned
