

Starting the engine

Your 4Ride exhaust contains poisonous carbon monoxide gas. High levels of carbon monoxide can collect rapidly in enclosed areas such as a garage. Do not run the engine with the garage door closed. Even with the door open, run the engine only long enough to move your 4Ride out of the garage.

❑ Cold engine starting

- ❶ Shift the transmission into neutral.
- ❷ Raise the side stand.
- ❸ With the throttle fully closed, operate the kickstarter. Starting from the top of the kickstarter stroke, kick through to the bottom with a rapid, continuous motion.
- ❹ After the engine starts, run it for a few minutes, “blipping” the throttle, until it warms up enough to idle.

❑ **If the engine does not start**  **P.83**
