

Engine oil

Oil consumption varies and its quality deteriorates over time, according to riding conditions. Regularly check the engine oil level and refill if necessary with the recommended oil. Old or dirty oil must be changed as soon as possible.

Selecting engine oil

Consult the "Specifications" section to find out which oil is recommended for your engine.

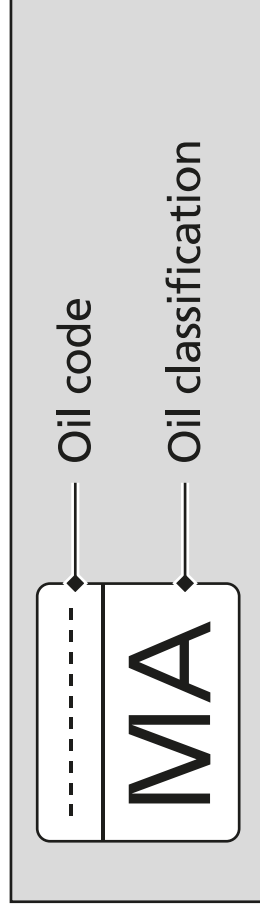

P. 107

Check the label to ensure that the oil meets all the following standards:

- Standard JASO T 903*1: MA
- Standard SAE*2: 10W-30
- API Classification*3: SG or better

- *1. Standard JASO T 903 is a reference for 4-speed motorcycle engine oils. There are two classes: MA and MB. For example, the following label indicates the classification MA.

- *2. Standard SAE classifies oils according to their viscosity.

- *3. The API classification specifies the quality and performance of engine oils. Use SG grade or better oils, except for those labelled as "Energy Conserving" in the circular API service symbol.
