

Basic maintenance

Brake Fluid

Do not add or replace brake fluid, except for in the case of an emergency. Only use new brake fluid from a sealed container. If you add fluid, have your dealer inspect the brake system as soon as possible.

NOTICE

Brake fluid can damage plastic and painted surfaces.

Clean any spills immediately and carefully wash the affected area.

Recommended brake fluid:

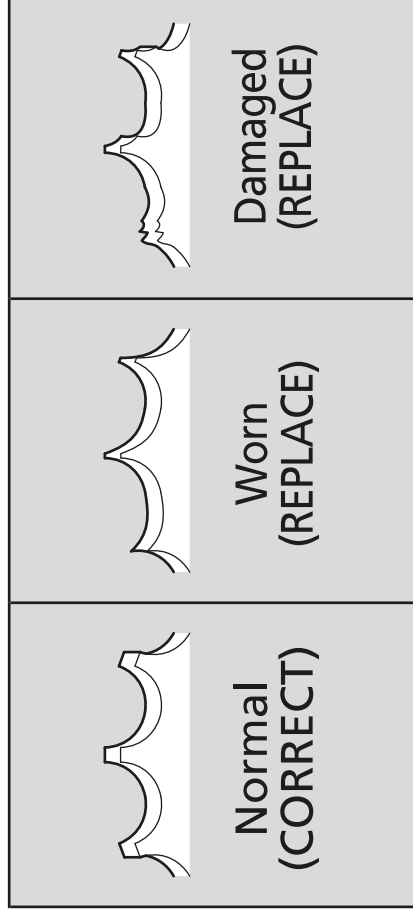

DOT 4 brake fluid

Drive chain

The drive chain must be inspected and lubricated on a regular basis. Inspect the chain more often if you ride on roads in poor condition, at high speeds, in dusty areas, areas with water and mud or with repeated accelerations.

If the chain does not move smoothly, makes strange noises, has damaged rollers or loose pins, have it inspected by your dealer.

Also inspect the engine and rear wheel sprockets. If either of them has worn or damaged teeth, have your dealer replace them.

NOTICE

The use of a new chain with worn sprockets will cause the chain to quickly become worn.
