

Driver Controls

Shift Paddles (except for SXS1000M3)

Your Honda SXS is equipped with a pair of shift paddles that are located behind the steering wheel.

Pull the upshift paddle (+) to shift to a higher gear position and the downshift paddle (-) to shift to a lower gear position.

In MT mode, the shift paddles are operated to drive the SXS. In AT mode, you can drive the SXS without operating the shift paddles. You can also operate the shift paddles to temporarily change the gear position. (See page 88 for more information)
