

## Checking the Coolant

1. Place your motorcycle on a firm, level surface.
2. Check that the coolant level is between the UPPER and LOWER level marks in the reserve tank.

If the coolant level is dropping noticeably or the reserve tank is empty, you likely have a serious leak. Have your motorcycle inspected by your dealer.

## Adding Coolant

1. If the coolant level is below the LOWER level, add fluid until the level reaches the UPPER level mark.  
Add fluid only from the reserve tank cap and do not remove the radiator cap.
2. Remove the reserve tank cap and add fluid while monitoring the coolant level.
  - ▶ Do not overfill above the UPPER level mark.
  - ▶ Make sure no foreign objects enter the reserve tank opening.
3. Securely reinstall the cap.
