

Measure the voltage between the terminals of the wire harness side.

Connection:

Light green/black (+) - Green/orange (-)

Standard: 4.75 - 5.25 V

Out of range

- Open or short circuit in Light green/black wire.
- Loose or poor contact on the ECM connectors.

Correct

Turn the ignition switch to "OFF".
Connect the BARO sensor 3P connector.

Disconnect the ECM connectors.
Connect the test harness to ECM connectors.

Turn the ignition switch to "ON".
Measure the voltage at the test pin box terminals (page 5-11).

Connection: No. 38 (+) - No. 22 (-)

Standard: 2.7 - 3.1 V (760 mm Hg/1,013 kPa)

Out of range

- Faulty BARO sensor.

Correct

- Replace the ECM with a new one, and inspect it again.
